SHIVAM OMER

Backend Engineer | Python, FastAPI, Django | Event-Driven Systems & Cloud Infrastructure
Delhi, India | +91-8303669396 | shivamrajomar@gmail.com
shivam-portfolio-gold-omega.vercel.app | linkedin.com/in/programmer-shivam | github.com/shane-Coder

PROFESSIONAL SUMMARY

Backend Engineer with 2.5+ years building event-driven microservices, asynchronous processing pipelines, and the deployment automation around them — Python, FastAPI, Django, Kafka, PostgreSQL and MongoDB on AWS and Azure with Docker, Kubernetes, Terraform and CI/CD. Cut manual deployment effort by over 90% at Solytics Partners, and currently builds and operates two live products end to end: a cron-monitoring service and a consumer invitation platform.

TECHNICAL SKILLS

Languages: Python, Go, SQL, TypeScript, Bash
Backend & APIs: FastAPI, Django, Django REST Framework, SQLAlchemy, Microservices, Event-Driven Architecture, System Design
Data & Messaging: PostgreSQL, MongoDB, Redis, Apache Kafka
Cloud & DevOps: AWS, Azure, Docker, Kubernetes (EKS), Terraform, Ansible, Helm, Jenkins, GitHub Actions, CI/CD, Linux
Observability & Testing: Prometheus, Grafana, ELK Stack, PyTest, Postman, Git

PROFESSIONAL EXPERIENCE

Independent Software Engineer — Product Development **Sep 2026 – Present**
Self-Employed *Delhi, India · Remote*

- **cronbell** — built and operate a dead-man's-switch monitoring service for cron jobs and scheduled tasks (FastAPI, PostgreSQL/Neon, SQLAlchemy, Redis, Docker, Fly.io): **33 REST endpoints**, a **52-test PyTest suite** in CI, Slack/Discord/webhook alerting, per-account Prometheus metrics, opt-in public status pages, CSRF protection and rate limiting on every state-changing endpoint; running in production with **20+ registered accounts**. Live · GitHub
- Re-architected it off an always-on Celery worker and Beat scheduler onto a token-guarded internal endpoint driven by an external scheduler, removing 24/7 compute from the hosting bill while preserving overdue detection; Redis retained for rate limiting only.
- **NyotaNow** — shipped a server-rendered invitation platform with one-tap RSVP and host dashboards in Next.js 16, React 19, TypeScript and PostgreSQL with Drizzle on Vercel; relocated app and database to Singapore, bringing page loads to roughly 0.3s from India. **36 invites created, 316 invite views and 37 RSVPs** to date, with **22% of new invites coming from guests who received one** — organic growth, no ad spend. nyotanow.in · GitHub

Software Development Engineer **Jan 2026 – Aug 2026**
Move37AI *Delhi, India*

- Developed event-driven backend services using Python, Django, Kafka and MongoDB, processing **10,000+ asynchronous events daily** and delivering real-time notifications in **under 5 seconds**.
- Designed and shipped **15+ RESTful microservice endpoints** for AI-driven, import-export and accounts-receivable platforms, improving backend scalability and transaction orchestration.
- Implemented Kafka producer-consumer architectures handling thousands of distributed events with resilient retry and asynchronous processing patterns.
- Containerized **6+ backend applications** with Docker and streamlined Linux deployment workflows, cutting environment setup from **~2 hours to under 15 minutes**.

DevOps Consultant **Mar 2025 – Dec 2025**
Solytics Partners *Pune, India*

- Managed and optimized **2 Amazon EKS clusters across 3 environments** (development, staging and production) running enterprise applications and analytical platforms.
- Automated CI/CD workflows with Jenkins, Groovy, Docker and Kubernetes, reducing manual deployment effort by **over 90%** and cutting release cycles from **days to under an hour** across staging and production.
- Maintained infrastructure as code for **~20 services** with Terraform, Ansible, Helm and AWS, and instrumented them with ELK, Prometheus and Grafana observability while supporting AWS and Azure cloud modernization.

Backend Developer **Mar 2024 – Feb 2025**
Solytics Partners *Pune, India*

- Engineered WarpDrive, a Python execution framework that reduced task execution latency by nearly 80% across distributed notebook workflows.
- Re-architected asynchronous execution services in Django and Golang, accelerating processing throughput 4x for large-scale analytical workloads.
- Built core components of the User Defined Functions ecosystem for Nimbus, a banking platform, integrated with Gitea, JupyterHub, Vault, Kubernetes and AWS services.

SELECTED PROJECTS

Log Management Microservice | *Django, Apache Kafka, MongoDB, Docker* · GitHub
- Distributed log ingestion platform processing asynchronous events through Kafka streaming, with real-time alerting and analytics-ready MongoDB storage.

Azure Databricks Delta Lake Pipeline | *Azure Databricks, PySpark, Delta Lake, SQL* · GitHub
- Cloud-native pipeline using Delta Lake ACID tables and micro-batch processing with incremental upserts and versioned time-travel queries.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science and Engineering **Aug 2019 – Jun 2023**
Dr. A.P.J. Abdul Kalam Technical University *Kanpur, India*

ADDITIONAL

Writing: I got tired of silent cron failures, so I built a dead man's switch · I built a WhatsApp invite app for Indian families — here's what broke (Medium). Audience of 12,800+ on LinkedIn. 700+ DSA problems solved on LeetCode and 350+ on GeeksforGeeks.
